Frequently asked questions

Q: How do you install Deziner Panels Acrylic products?

A: For wall installations there are two ways of installing the panels. If you are installing a clear/see through panel then screwing the panel to the wall every 1 - 1.2 m will be sufficient at the top and bottom. We recommend to use screw grommets and caps to cover the screws to give a neater finish. You also need to make sure the wall is reasonably flat and has minimal bows. Please note that the wall behind will need to be pre finished (eg painted white) before you fix the panels to the wall.

If you are installing a solid colour acrylic panel then silicone/liquid nails portions approx 30mm wide and every 500mm or so, top, middle and bottom is fine. Be sure to use adhesive tape or supports to hold the panel on the wall until the adhesive dries before removing them. If the wall has some bows/shallow section, you will need to add more silicone/liquid nails to these areas to make up the difference

Q: How do I install the acrylic panels as a bench top?

A: Make sure the bench top is completely level and has a flat surface with no extrusions, then apply silicone/liquid nails to the same distances as mentioned above. Once bench has been made square and in the right position, don't touch it for 24 to 48 hours for it to fully adhere

If you are installing a clear/ see through acrylic bench top, be sure that your frame is supporting the bench every 500mm to get total stability. We recommend that you screw the bench to the supports using such products like grommets and caps

If you purchase a bench top with waterfall sides we recommend that you have professionals install the product for maximum results

Q: Will Acrylic panels ever fade outside?

A: As long as our Acrylic panels have been specially ordered with a UV protection built in to them, then our product will resist fading for up to 2 to 3 years depending on conditions

Q: What do you use to clean Deziner Panels acrylic products?

A: Our acrylic panels are resistant to general household chemical cleaning products and they will not discolour or damage them. Please do not use a heavy scourer on the surface as it will scratch

Q: Are Deziner panels acrylic products temperature resistant?

A: Our acrylic panels have great temperature resistant qualities and can be placed under " radiant " temperatures up to and not exceeding 80 degrees Celsius (within 150mm) without being damaged in any way. Don't expose a direct flame to the panels as it starts to discolour after a short exposure time. Do not place hot baking trays or pots directly onto the surface

Q: Will Deziner panels acrylic products be damaged or break if something is dropped on them or hit with an object?

A: Our acrylic panels are resilient to impact, they are made from an eco friendly non toxic high strength polycarbonate resin and can take a high strength impact without breaking. Our products won't shatter like glass

Q: Is this product flammable?

A: Our product has been tested and passed a International ASTM Standard Test – Product meets or exceeds Class 1 rating as specified in NFPA Life Safety Code 101 and IBC 804.2 Classification

Q: Can I use the acrylic products as a splash back behind a cooking appliance?

A: Yes, our acrylic panels are manufactured to meet the relevant Australian standards that are required for wall protection behind cooking appliances in a domestic setting. For the full specifications on this please contact Deziner Panels for the relevant documentation

Q: How do I cut or drill the Deziner Panels acrylic products?

A: You can cut the panels using a Acrylic blade in a hack saw or a ceramic disc on a 4 inch grinder. To drill holes in our panels, please use a sharp metal drill bits to drill the panels. Start with a small 2mm drill bit and gradually go up in size until you reach the desired hole size

Q: How do I install Deziner panels acrylic products as a replacement to window glass, shower screens and room wall dividers?

A: For installation of our acrylic panels in window/wall divider/shower door etc we recommend that you have a professional install it

Q: How do I get out a scratch from my acrylic panel?

A: If you accidentally scratch the surface of our acrylic panels, to remove it you will need to use firstly #800 wet and dry sand paper on the scratched area only using water with it. Then followed by #1000 with water over the scratched surface. After the scratch has been removed, you can use a polisher and wax to bring the shine back to the panel(car wax is ok to use)

Q: Does Deziner panels acrylic products come with a warranty?

A: Yes, our products come with a 12 month warranty which covers:

- Abnormal damage during “ normal ” use of the product otherwise stated in this document

The warranty does not cover:

- Any damage due to an incorrect installation of the product otherwise stated in this document
